

## NEW PRODUCT

# DMX Pocket Watch™ - The Simple Basic DMX512 Tester

Do you ever want to know whether DMX512 is really on that cable? Do you need a tester that checks that the data is correctly formatted, that the cable is wired in phase? Maybe a *Lil'DMXter* is a bit of overkill, a little too big and a little expensive. You could get a LED/ XLR slug type tester, but that doesn't tell you very much.

The **DMX Pocket Watch™** is small (1", 2.25, 4.25"). It's simple - no controls or switches. The unit turns on automatically when connected to DMX512. All data are displayed on a simple 12 LED clock face style display. It's inexpensive.

The **DMX Pocket Watch™** tests if valid DMX512 is present.

- It checks the break

- It checks the MAB

- It checks for non zero start codes

- It displays the address and level of the first DMX channel sent.

OK, so it isn't a DMXter. But here's a real DMX tester from Goddard Design Co. that fits in your pocket. It also leaves some of that nice green folding stuff in your pocket too!

Try the **DMX Pocket Watch™** risk free for 30 days

Price \$98.00 - Or get 10 for \$800.00
